### CONNECT WITHOUT OPC

"Oh Please Connect" is a thing of the past. DVPublisher uses the built-in DeltaV libraries to get at your data and streams it using MQTT.

### STREAM IT ANYWHERE

With MQTT, DVPublisher enables you to send your data to multiple system simultaneously. Whether it's to the cloud or to a local database, the choice is yours.

### KEEP IT SAFE

With TLS 1.2 encryption, your data stays safe and can only be read by those you allow.

The software also dynamically manages its resource consumption to keep your DeltaV system running optimally.
